

McGraw Systems LLC Launches bStable Advanced®

WOBURN, Mass. – January 4, 2010 – McGraw Systems LLC today announced the release of bStable Advanced.

“We are absolutely elated to add bStable Advanced to our product family based on overwhelming demand for additional Depression and Bipolar Disorder functionality. Our customers have strongly demanded that we support various co morbid disorders such as attention deficit hyperactivity disorder (ADHD), social phobia, and anxiety as many also suffer from these “cousin” disorders. With bStable Advanced, we move from providing monitoring mechanisms to a robust tool set that can be used with psychologists to employ various psychotherapy approaches such as Cognitive Behavioral Therapy (CBT) based on patient reported data,” said Benjamin F. McGraw IV, President and CEO of McGraw Systems LLC.”

bStable Advanced tracks and manages every aspect of the patient's life impacted by Depression and Bipolar Disorder including: medications, supplements, sleep, exercise regimen, mood, triggers, symptoms, diet, goals, interpersonal conflicts, and activities.

Within the system there are modules for: attention deficit hyperactivity disorder (ADHD), cognitive behavioral therapy (CBT), crisis management, diagnosis information (including family history), energy tracking, expense tracking, lab tests, legal documents, menstruation, physical exams, physical pain, psychosis, and social phobia.

bStable Advanced has a module focused on adolescents and children. This module allows the tracking of behavior exhibited by adolescents or children suspected of displaying Depression or Bipolar Disorder symptoms.

Over 50 rich, multidimensional, interactive, graphical reports are standard with bStable Advanced. These reports provide an updated status on the patient's life and can be consolidated and sent to medical professionals and loved ones for preventative care. New to bStable Advanced is the One Page Combination Report. It is a single page report that can be sent to medical providers for quick and easy review of the patient's state prior to or during the patient visit. bStable Advanced also adds support for ultra-ultra-rapid cycling (or ultradian).

bStable Advanced retails for \$199. Additional copies of bStable Advanced for loved ones or medical professionals associated with the patient can be purchased at the friend, family, or medical provider rate of \$99.
